🌐 [Amr El-Sheshiny](#) 📄 [Amr Farahat](#)

Senior UX/UI Designer with 6+ years of experience crafting user-centered digital products for web and mobile. Skilled in translating complex ideas into intuitive, visually engaging interfaces using tools like Figma and Webflow.

I have worked across multiple industries including software and maritime services, collaborating with cross-functional teams to deliver scalable and impactful design solutions. Passionate about improving user experiences, optimizing conversion, and building meaningful digital products.

📁 Professional Experience

Sr. UXUI Designer & Front-end Designer 10/2025 – Present | Alexandria, Egypt
AK-Group

Currently working as a Senior UX/UI Designer, leading the end-to-end design process from research and ideation to high-fidelity designs and implementation. Creating user-centered, responsive, and accessible interfaces while also developing projects using Webflow and front-end technologies (HTML, CSS, JavaScript). Driving design decisions, improving product performance, and collaborating closely with stakeholders and developers to deliver impactful digital experiences.

Sr. UX/UI Designer "Remotely" 06/2019 – Present | Canada, Calgary
ProcureDox Solution

Progressed to working with a Canada-based company specializing in SaaS solutions for the Oil & Gas industry, contributing to the design of data-driven platforms and dashboards. Focused on simplifying complex workflows, improving operational efficiency, and enhancing user experience. Collaborated with cross-functional teams to deliver scalable, high-quality products aligned with business and user needs.

Junior UXUI Designer 02/2017 – 2019 | Saudi Arabia, Jeddah
Proleaders Institute

While completing degree I started my career as a Junior UX/UI Designer, supporting the design of web and mobile interfaces through wireframes, mockups, and basic prototypes. Assisted in user research and usability improvements while collaborating with senior designers and developers to deliver consistent and user-friendly experiences. This role helped me build a solid foundation in design principles, tools like Figma, and understanding user behavior.

🎓 Education

Bachelor Degree 08/2013 – 2019 | Egypt, Alexandria
Faculty Of Fine Arts Alexandria - Graphic Design Department

Skills

UX & Product Design: — User Research, User Flows, Wireframing, Prototyping, Interaction Design, Usability Testing, A/B Testing, Data-Driven Design, Problem Solving.

UI & Visual Design: — Responsive Design, Design Systems, Component Libraries, Typography, Color Theory, Visual Hierarchy, Accessibility (WCAG 2.1)

Tools & Technologies: — Figma, Adobe XD, Webflow

Front-End Development: — HTML, CSS, JavaScript, Bootstrap, React JS

Performance & Optimization: — UX Optimization, Conversion Improvement, Performance Optimization, Reducing User Friction

Collaboration & Workflow: — Cross-functional Collaboration, Developer Handoff, Agile/Scrum, Stakeholder Communication, Iterative Design Process

Projects

ERP System for Maritime Company

Problem: The company needed a centralized system to manage multiple departments including HR, Procurement, IT, Accounting, Admin, and Quality, as manual processes were slow and error-prone. **Role:** Led the UX/UI design process, creating user flows, wireframes, and high-fidelity prototypes. Designed dashboards and interactive interfaces, ensuring responsive and accessible design. Collaborated with developers for smooth implementation.

Impact: Streamlined workflow across departments, improved task efficiency, reduced human errors, and enhanced overall user satisfaction.

Egypt Sea Agency Website

Problem: The maritime agency's website was outdated, lacked user-friendly navigation, and did not showcase services clearly.

Role: Redesigned the website UI/UX, built interactive layouts, ensured responsiveness across devices, and collaborated with developers for smooth Webflow implementation.

Impact: Improved online presence, enhanced user experience, and increased client inquiries through clear information architecture and engaging visuals.

TransGlobal Alliance Website

Problem: The existing site lacked clarity in presenting global logistics services, leading to high user confusion and low engagement.

Role: Redesigned the entire UX/UI, created clear information architecture, wireframes, and high-fidelity visuals. Built and implemented the design in Webflow with responsive layouts and reusable components.

Impact: Increased user engagement by improving navigation clarity and visual hierarchy, resulting in better service discovery and stronger brand positioning online.

MahoneyEgypt Website

Problem: The previous site did not effectively communicate the company's offerings in equipment and service solutions, resulting in low lead capture.

Role: Led UX research and competitive analysis, designed user flows and high-quality interfaces, and developed the site in Webflow with a focus on usability and conversion paths.

Impact: Enhanced user experience and increased lead generation by improving content structure, visual design, and calls-to-action.

AKG-EG Website

Problem: The corporate site lacked modern design, responsiveness, and clear service presentation, making it difficult for visitors to understand offerings and engage.

Role: Redesigned the visual UI, organized complex content into clear sections, implemented responsive design, and optimized site performance using Webflow.

Impact: Delivered a polished, professional online presence that improved user trust and engagement metrics, while streamlining content accessibility.

AK-Trade Website

Problem: Users struggled to find product information and company services efficiently due to poor navigation and cluttered layout.

Role: Conducted UX improvements starting with wireframes, created intuitive UI designs, and developed the final site in Webflow with emphasis on responsive interaction design.

Impact: Increased usability and user satisfaction, reduced bounce rates, and positioned AK-Trade as a credible and easy-to-navigate online resource.

LookWild Application

Problem: The existing online presence did not effectively reflect the brand’s adventurous identity or guide users clearly to key services, leading to low engagement and unclear conversion paths.

Role: Conducted UX analysis and user flow mapping, redesigned UI with a focus on brand storytelling and visual appeal, and developed the site in Webflow using responsive layouts and interactive elements for a stronger user experience.

Impact: Enhanced brand visibility and user engagement by delivering a visually compelling, easy-to-navigate site that improved clarity around offerings and strengthened overall user interaction.
